# WINE SELECTIONS

## ORGANIC, BIODYNAMIC & SUSTAINABLE

Our wine concept in Mandhoo restaurant uses organic, biodynamic & sustainable wine production. We believe that using this agriculture is the only way to obtain better-balanced, healthier and more efficient vineyards, which results in better quality grapes and therefore in better wine.

### ORGANIC

Wines are made with grapes grown without chemical fertilizers, herbicides or insecticides that can hurt soil, plants, wildlife or ultimately show up in the wine. Instead, biologically active soil is maintained in vineyards through alternatives such as cultivating the soil and planting cover crops, using natural fertilizers, promoting a biodiversity of plants and encouraging natural predators of insect pests. Also, processing such as filtration and clarifying are kept to a minimum, with no use of chemical additives.

### BIODYNAMIC

Farming techniques utilize the vineyard's natural resources to cultivate the highest quality grapes possible without the use of pesticides, fungicides, herbicides, synthetic fertilizers, growth stimulants. It's been said that Biodynamic looks at the vineyard or farm as a "living, breathing organism" itself from the soil to the sun, all striving for a well-balanced ecosystem that is self-sustaining. Using homeopathic sprays, herbal preparations and lunar cycles, soil fertility is increased and vines are protected from pests and diseases.

### SUSTAINABLE

Sustainable wine production, growers also look to their winemaking operations to be sustainable. This involves various aspects such as: reducing energy used in the winemaking process, reducing the amount of water used to clean equipment, treating waste water and reusing it, using lighter weight bottles and recycled cardboard cartons. Energy efficiency and climate change are addressed in a variety of ways, such as reducing carbon emissions, improving our vineyard and production management practices to minimize the impact on the ecosystems, and increasing the interaction
